Aluminum Bottles = Zero New Plastic

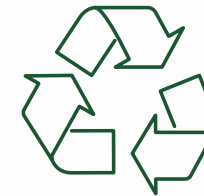

Aluminum vs Plastic

- ✓ Aluminum is infinitely recyclable. Plastic can only be reused 2 times.
- ✓ Only 5-10% of plastic put in recycling gets recycled in the U.S.A.
- ✓ As plastic breaks down in landfills, it is toxic.
- ✓ Plastic bottles off-gas when they are new and when they break down.
- ✓ Aluminum keeps supplement ingredients intact longer = extended expiration dates.
- ✓ Aluminum has a lighter carbon footprint.

Semaine is Paving the Way

- We are **the first** supplement company to use aluminum bottles.
- All of our **full sized products** are available in aluminum bottles.
- Our goal is to be **plastic neutral** with all our packaging in 2 years (currently we still use plastic in our blister packs and safety seals).
- We know how important this is for our planet and to our customers. It is a priority for us to continue to **discover more sustainably packaging** and production options.
